

Wood Cutting Board Maintenance Directions

Cleaning & washing –

- Wash cutting board with soap and warm water and scrub well.
- After washing dry immediately with a towel and let it air dry standing up right or on a raised rack.
- For minor stains and natural odor blocker you can apply lemon juice or white vinegar directly to the areas. The acids will help to neutralize the organic material or fats causing the problem.
- Apply cutting board oil or cream – application can be made directly to the boards surface once it is dry. Use a small towel or paint brush to help distribute the oil evenly throughout the board. Make sure that your surfaces are dripping wet on all sides. Let the oil soak in for a few hours or overnight if possible.
- Oil board at least once a month or whenever the board becomes noticeably dry
