

# Kitchen sinks

## GUARANTEE INFORMATION

Alveus **kitchen sinks** carry a **5 years guarantee** against any manufacturing or material defects (replacement parts only, excluding labour and/or indirect costs). Guarantee applies to sinks installed according to installation instructions, used as recommended and in normal residential conditions, and cleaned as per cleaning instructions. The guarantee is valid only with fully completed warranty card and with sales receipt containing date and place of purchase. The guarantee does not cover misuse, accidental damages, improper installation, unauthorized repair or alteration, abnormal usage, negligence or damage caused by improper maintenance or cleaning. Mechanical damages, scratches, scale and normal wear of parts are excluded from the guarantee.

## CLEANING AND CARE - 18/10 GRADE STAINLESS STEEL SINKS

ALVEUS stainless steel sinks are made of **premium 18/10 grade stainless steel**, the advantages of which are: easy cleaning and high degree of hygiene, resistance to high temperatures and rapid temperature changes (thermal shocks), resistance to impacts, resistance to chemical influences, 100 per cent recyclability.

After the installation and before use, the sink should be thoroughly cleaned from all particles, in particular the iron particles, which can develop into rust stain that can over time attack the steel material.

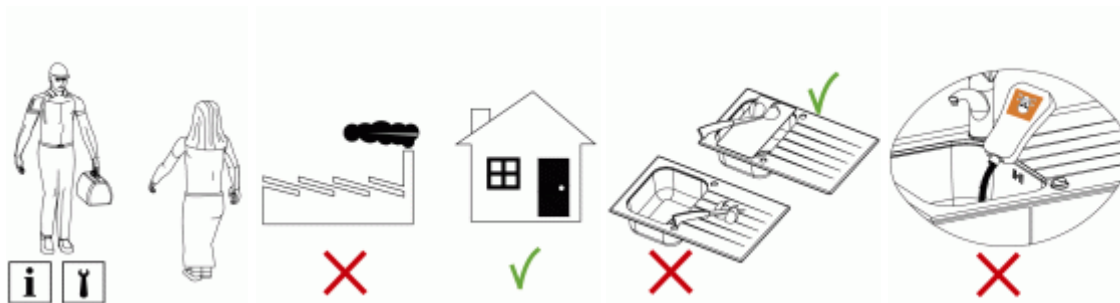

**Regular and appropriate cleaning** of ALVEUS sinks gives them attractive appearance for years to come:

- They should be cleaned by means of mild liquid household detergents and cloth.
- Silver cleaners, steel wool, bleaches or abrasive powders should never be used.
- Utensils made of carbon steel without protective surface should not be left on the sink as they may cause scratches, stains, discoloration or even leave harmful deposits.
- In the event of strong acids coming into contact with the sink, they should be washed off immediately with plenty of clean water.
- To avoid staining, corrosive foodstuffs (salt, vinegar, fruit juice, mustard, mayonnaise, etc.) should not be left on the sink for any longer periods of time.
- It is recommended that after each use ALVEUS sinks are cleaned and dried by soft cloth.

It is essential that the above cleaning and user instructions are strictly adhered to so that the product guarantee is not invalidated.

✓ = OK

CLEANING AND CARE - ALGRANIT COMPOSITE SINKS

ALVEUS Algranit sinks are made of granite particles bound together by high-quality polymer resin to achieve excellent sturdiness and resistance to temperatures of up to 280<sup>0</sup>C. Their smooth surface allows for easy cleaning and removal of dirt, stains, scale or even accidentally spilled chemicals, and gives superior scratch and impact resistance.

- The sink should be cleaned with ordinary liquid kitchen cleaners or with very fine abrasive detergents suitable for cleaning stainless steel kitchenware.
- Everyday stains, watermarks and dirt (sediments from washing-up) should be simply washed away with clean water and wiped with clean, soft and dry cloth. This should be done after each and every sink use and will ensure that mineral deposits from water do not accumulate on sink's surface.
- Fruit juices, coffee, tea and similar stains or grease should be immediately cleaned off with washing-up liquids and soft cloth/sponge, and then rinsed with clean water.
- Other stains, such as water-based colours and inks, should be wiped off immediately with cloth soaked in diluted alcohol, then washed away with clean water.
- Lime-scale can be removed by applying up to 9 per cent concentrated acetic acid (for example table wine vinegar) to the affected area, leaving it to work for a few minutes, then washing the surface with clean water and wiping with clean cloth. Never clean with rough abrasives or scourers which might tarnish or raze the surface of the sink.
- The sink must not be exposed to strong chemicals, such as:
  - acids and lyes of over 10 per cent concentration
  - strong cleaners containing over 5 per cent of active substance
  - varnish removers
  - solvents
  - oven cleansers.

Should a contact be made, quickly wash thoroughly the surface with water.

- Sink material is more warmth-resistant than any other comparable material, however, hot kitchenware should not be placed on the surface of the sink directly from the oven or cooker (hot pans, pots and dishes).
- Leave cold water running while pouring hot water into the sink.
- Do not cut or chop directly onto the surface of the sink.

---

## Kitchen mixer taps

### GUARANTEE INFORMATION

Alveus **taps** are covered by manufacturers guarantee for faultless operation within specified period of time, starting on the day of your purchase from a retailer. The guarantee covers any manufacturing or material defects (replacement parts only, excluding labour and/or indirect costs) and applies to taps installed according to installation instructions, used as recommended and under normal residential conditions, and cleaned as per cleaning instructions. Mechanical damages, scratches, scale and normal wear of parts are excluded from the guarantee.

The **guarantee period** for taps and tap parts is valid **for 5 years**.

The guarantee for colour finish on colour-coated taps is valid for 2 years.

### INSTALLATION

Alveus taps should be installed by a qualified or professional person. Any improper installation, unauthorized repair or alteration will invalidate the tap guarantee. Prior to tap installation, all water pipes need to be thoroughly washed out. In order to avoid any mechanical damages caused by dirt and rough particles within water supply system, the tap should be connected through an angular filter valve.

### CLEANING AND CARE

Alveus taps should be cleaned with soapy water and soft cloths. Please do not use any abrasive or chemical cleaning agents, rough cloths, sponges or steelwool. It is recommended that the taps are dried off with soft cloth.
